MOON

According to designer OLIVER KÖNIGS, MOON is a new interpretation of the classic ceiling light, and because it is available both as roundly emitting volume and as diffused great light, it is a wonderful every conversion of the elegant and architectural lighting plane as well. In both cases MOON is formally reduced to the most universal of all shapes, the plain and perfect circle. The most particularly physical characteristic of MOON is its little height due to the use of LED, it creates a sleekly smooth and elegant appearance of fine surface mounted models. And regardless of the ceiling versions of the luminaire, the minimal height facilitates many options even when the light is only little versions of the luminaire. Technically MOON is characterized by an innovative modular concept with an exchangeable lighting engine in its center. Thus a large variety of product configurations are available to the customer, so that the luminaire can be utilized in many different situations.

Gemäss dem Designer OLIVER KÖNIGS ist MOON gleichzeitig Neuinterpretation der klassischen Deckenleuchte und zeitgemässe Umsetzung der eleganten architektonischen Lichtfläche. Denn sie ist sowohl als räumlich strahlendes Volumen als auch als diffus leuchtende Lichtfläche erhältlich. In beiden Fällen ist die MOON Formel reduziert auf die universellste aller Formen, den schlichten, perfekten Kreis. Formal herausstechend ist dabei die durch LED ermöglichte, geringe Höhe der MOON. In den Aufbauversionen erhält die Leuchte dadurch eine besonders elegante und schlanke Erscheinung. Und in den Einbauversionen eröffnen sich durch die reduzierte Höhe ganz neue Möglichkeiten auch bei schwierigen Platzverhältnissen. Technisch zeichnet sich die MOON durch ein innovatives Baukastenprinzip aus, in dessen Zentrum die austauschbare Leuchtenheit installiert wird. Dem Kunden steht dadurch eine Vielzahl an unterschiedlichen Konfigurationen der Leuchte zur Verfügung, so dass sie sich in den unterschiedlichsten Situationen einsetzen lässt.
